$$\mathbf{n} = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix} \mathbf{m} \quad (2.0.6)$$

$$\mathbf{n} = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix} \begin{pmatrix} -1 \\ 5 \end{pmatrix} \quad (2.0.7)$$

$$= \begin{pmatrix} \frac{1}{5} \\ \frac{-1}{5} \end{pmatrix} \quad (2.0.8)$$

The equation of the line in terms of the normal vector is then obtained as

$$\mathbf{n}^T (\mathbf{x} - \mathbf{P}) = 0 \quad (2.0.9)$$

$$\Rightarrow (1 \quad 5) \mathbf{x} = 22 \quad (2.0.10)$$

1 QUESTION No 2.15

Find the equation of the line passing through $\begin{pmatrix} -3 \\ 5 \end{pmatrix}$ and perpendicular to the line through the points $\begin{pmatrix} 2 \\ 5 \end{pmatrix}$ and $\begin{pmatrix} -3 \\ 6 \end{pmatrix}$

2 SOLUTION

$$\mathbf{A} = \begin{pmatrix} 2 \\ 5 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} -3 \\ 6 \end{pmatrix} \quad (2.0.1)$$

If the direction vector is $\begin{pmatrix} 1 \\ m \end{pmatrix}$ the slope is m (2.0.2)

$$\mathbf{m} = \begin{pmatrix} -3 \\ 6 \end{pmatrix} - \begin{pmatrix} 2 \\ 5 \end{pmatrix} \quad (2.0.3)$$

$$\mathbf{m} = \begin{pmatrix} -5 \\ 1 \end{pmatrix} \quad (2.0.4)$$

$$\mathbf{m} = \frac{-1}{5} \quad (2.0.5)$$

Given point $\mathbf{P} = \begin{pmatrix} -3 \\ 5 \end{pmatrix}$ and slope $m = \frac{-1}{5}$. The direction vector is $\mathbf{m} = \begin{pmatrix} -1 \\ 5 \end{pmatrix}$. Hence, the normal vector
